

Airline Reservation System

By: Group SW306E11

Dec. 2011

Titel:

Airline Reservation System

Tema:

Developing applications from users to data, algorithms and tests and back again

Project period:

P3, Fall Term 2011

Projectgroup:

SW306E11

Partisipents:

Jakob Lynge Albertsen
Johan Sørensen
Jonathen Bernstorff Nielsen
Tom Reinholdt Petersen
Tommy Knudsen

Supervisor:

Darius Šidlauskas

Synopsis:

This report describes the development of an Airline Reservation System. The intention of the system is to give costumers the ability to search for flights between two airports. Furthermore, the system also gives the user the ability to book flights. The report also includes a system definition along with an analysis of both the problem- and application-domain. The implemented system fulfills the requirements described in the system requirements.

Circulation: 7

Pagecount: 13

Appendix count and type: 6, Bibliography, Best-Path Algorithms, Protocol Specification, Process Analysis, Red Chair and a Danish Abstract.

Finished on 19th Dec 2011

The report content is freely available, but publication (with source), only after agreement with the authors.
